

## SELF STUDY REPORT APPENDIX A COURSE SYLLABUS

<b>Course Name</b>						
<b>Ferrous Extractive Metallurgy</b>						
<b>Code</b>	<b>Semester</b>	<b>Local Credits</b>	<b>ECTS Credits</b>	<b>Course Implementation, Hours/Week</b>		
				<b>Theoretical</b>	<b>Tutorial</b>	<b>Laboratory</b>
MET 332	VI	3	5	3	-	-
<b>Department/Program</b>	Metallurgy and Materials/ Metallurgy Option					
<b>Course Type</b>	Required metallurgy ops/elective materials ops			<b>Course Language</b>	Turkish	
<b>Course Prerequisites</b>	(None)					
<b>Course Category by Content, %</b>	<b>Basic Sciences</b>	<b>Engineering Science</b>	<b>Engineering Design</b>	<b>General Education</b>		
		60	40			
<b>Course Description</b>	Introduction to iron and steel making processes. Raw materials and metallurgical pretreatments. Production of metallurgical coke. Iron ore and characterization. Sintering and pelletizing of iron ore. Production of molten (pig) iron. Blast furnace and auxiliaries Principles of pig iron production at the blast furnace. Reduction of iron oxides. Bosh and heart reactions. Slag formation. Techniques for increasing blast furnace productivity. Basic principles of steel production and history processes. Steel production in basic oxygen converter. Steel production in electric arc furnaces. Deoxidation, gas purging and other ladle treatments. Principles and technologies of ingot and continuous casting methods. Technologies principles of long and flat products production. Production of sponge iron. Smelting reduction processes. Iron and steel industry in the world and Turkey.					
<b>Course Objectives</b>	1.Understanding the basic principles and applications of steelmaking. 2.Understanding the raw materials and the effects of its properties on production 3.Understanding the basic principles of productivity and applications 4.Understanding the basic principles of the steel product quality development and applications					
<b>Course Learning Outcomes</b>	Students who pass the course are expected to I. Understanding the principles and processes of steel production. II. Understanding the principles and applicability of straight and productive use of raw materials. III. Understanding and applying the principles of environment-friendly production IV. Understanding the principles and the applications of improving the steel quality V. Designing new steel production processes					
<b>Textbook</b>	Lecture notes					
<b>Other References</b>	1. Mc. GANON, H. E., The Making, Shaping and Treating of Steel, United States Steel, 10. Ed., Pittsburg 1985. 2. BISVAS, A. K., Principles of Blast Furnace Ironmaking, Theory and Practice, Cootha Publishing House, 1981. 3. Publications about the course.					
<b>Homework &amp; Projects</b>	Homework about the steel production by evaluation of the various raw materials in the environment-friendly processes and alternative processes. Preparation of personal homework and written reports about steel production.					
<b>Laboratory Work</b>						
<b>Computer Use</b>	.					
<b>Other Activities</b>	Visit to some industrial plants					
<b>Assessment Criteria</b>	<b>Activities</b>	<b>Quantity</b>	<b>Effects on Grading, %</b>			
	<b>Midterm Exams</b>	2	40			
	<b>Quizzes</b>	1	5			
	<b>Homework</b>	1	5			
	<b>Projects</b>					
	<b>Term Paper/Project</b>					
	<b>Laboratory Work</b>					
	<b>Other Activities</b>					
	<b>Final Examination</b>	1	50			

**SELF STUDY REPORT APPENDIX A COURSE SYLLABUS**
**COURSE PLAN**

Weeks	Topics	Course Outcomes
1	Introduction to iron and steel making processes.	I
2	Raw materials and metallurgical pretreatments. Production of metallurgical coke	II, III
3	Iron ore and characterization. Sintering of iron ore.	II, III
4	Peletizing of iron ore. Tests for detecting the properties of agglomeration products	II, III
5	Production of molten (pig) iron. History. Blast furnace and auxiliaries. Principles and production of pig iron at the blast furnace. Developing.	I, II,III
6	Reduction of iron oxides. Bosh and heat reactions. Slag formation. techniques for increasing blast furnace productivity.	I, II, III
7	Applications.	I, II, III
8	Basic principles of steel production and history of production processes. Steel production in basic oxygen converter.	I, II, III, IV, V
9	Steel production in electric arc furnaces. Applications.	I, II, III, IV, V
10	Deoxidation and secondary metallurgy treatments. Casting technologies.	I, II, III, IV, V
11	Production of sponge iron. Smelting reduction processes.	I, II, III, IV, V
12	Techno economical analysis of iron and steel industry in the world and Turkey.	I, II, III, IV, V
13	Analysis of steel production methods in terms of strategies of steel and raw materials.	I, II, III, IV, V
14	Applications	I, II, III, IV, V

**Relationship between the Course and METALLURGICAL AND MATERIALS ENGINEERING Curriculum**

	Program Outcomes	Level of Contribution		
		1	2	3
1	Ability to apply the knowledge of mathematics, science and engineering principles to solve problems in metallurgical and materials engineering (ABET:a)			X
2	Ability to characterize materials using standard and/or self designed experimental methods and to evaluate the results (ABET:b)			
3	Ability to design a system or a process, taking into consideration of the desired specifications, quality, ethics and environment. (ABET:c)	X		
4	Ability to communicate both orally and in the written form and to take part in, and provide leadership of the teams in the elucidation of engineering problems; (ABET:d, g)			
5	Ability to define, formulate and solve engineering problems in the development, production, processing, protection and usage of engineering materials. (ABET:e)			X
6	An understanding of professional and ethical responsibilities(ABET:f)			
7	An understanding of current/contemporary issues and impact of engineering solutions in broad cultural, national and global levels;. (ABET:h, j)	X		
8	A comprehension of the nature of engineering progress closely linked with the development of new materials and production processes. An ability to engage in life-long learning and a recognition of its necessity (ABET:i)		X	
9	Ability to use essential tools and techniques of modern engineering in the development, production, processing, protecting and surface treatment of the existing and new engineering materials. (ABET:k)		X	

1: Little, 2. Partial, 3. Full

**Course relationships with major elements of the field and material classes**

		Level of Contribution		
		1	2	3
<b>MAJOR ELEMENT OF THE FIELDS</b>	STRUCTURE		X	
	PROPERTIES		X	
	DESIGN EXPERIMENT/ANALYSE DATA		X	
	PROCESSING			X
	COST/PERFORMANCE		X	
	QUALITY/ENVIRONMENT	X		
	DESIGN PROCESS OR PRODUCT		X	
<b>MATERIAL CLASSES</b>	METAL			X
	CERAMICS		X	
	POLYMERS			
	COMPOSITES			

1: Little, 2. Partial, 3. Full

<b>Prepared by</b> Prof. Dr. M. Kelami ŞEŞEN	<b>Date</b> 10.12.2009	<b>Signature</b>
