Department/Program	Metallurgical and Materials Engineering			
Course Type	Elective	**Course Language**	Turkish	
Course Prerequisites	None			
Course Category by Content, %	**Basic Sciences**	**Engineering Science**	**Engineering Design**	**General Education**
	-	50	50	

Course Description	This course will offer an introduction to the concept of alloy and alloying. The course will include the what is alloy, atomic structure, periodic table, the application of chemical bonding theories on metals, valence bonding and chemical bonding in metal and alloys,metallic alloy theories, crystal structrues of intermetallic phases and dimension analysis, alloy atandards and world wide applications, Aluminum, copper, zinc, titanium, nickel alloys.
Course Objectives	Non ferrous metals and alloys course is an important engineering course for engineers in order to make alloys. In light of other engineering courses, this course emphasizes on • Alloy making theories and stuctural elements of alloys • Atomic structure,-Crystal structure of alloys • Alloying theories. • Solute solution alloys. Limited solution alloys. Intermediate solution alloys. Substitutional solute solution alloys. • Metastable phases. Intermetallic compounds. Covalent compounds. • Aluminium alloys and preparing techniques, Copper base alloys and preparing techniques, Zinc alloys and the other nonferrous alloying systems (Magnesium, Nickel, Titanium,…etc.)
Course Learning Outcomes	Students who pass the course will be able to have a thorough understanding on: I. Non ferrous metal and alloys : Physical and Mechanical Properties of aluminum, copper, zinc, magnesium, titanium, nickel metals and their alloys. Economical evaluation of production and recycling methods of these alloys. II. Standards on Non Ferrous Metals and Alloys. III. Intermetallic compounds. IV. Designing Nonferrous metal and alloys
Textbook	Handouts on Nonferrous Alloys

	Final Exam	**-**	**-**

COURSE PLAN

Weeks	Topics	Course Outcomes
1	What is alloy, atomic structure, periodic table	I
2	The application of chemical bonding theories on metals	I
3	Valence bonding and chemical bonding in metal and alloys	I
4	Metallic Alloy Theories	I-II
5	Crystal structrues of intermetallic phases and dimension analysis	IV
6	Microscobic Phase Equlibriums in Alloys	I-V
7	Alloy Standards and World wide applications	I-II-III
8	Aluminum alloys and industrial applications	II-III
9	Molten Aluminum Preparation Techniques and Alumimum Alloys melting practices	II-III
10	Copper and copper alloys preparation techniques and industrial applications	II-III
11	Zinc and Zinc alloys preparation techniques and industrial applications	II-III
12	Magnesium and magnesium alloys preparation techniques and industrial applications	II-III
13	Titanium and Titanium Alloys preparation techniques and industrial applications	II-III
14	Student projects presentations, discussions and evaluations.	I-II-III-IV-V

Relationship between the Course and Metallurgical and Materials Engineering Curriculum

	Program Outcomes	Level of Contribution		
		1	2	3
1	Ability to apply the knowledge of mathematics, science and engineering principles to solve problems in metallurgical and materials engineering (ABET:a)		X	
2	Ability to characterize materials using standard and/or self designed experimental methods and to evaluate the results (ABET:b)			
3	Ability to design a system or a process, taking into consideration of the desired specifications, quality, ethics and environment. (ABET:c)	X		
4	Ability to communicate both orally and in the written form and to take part in, and provide leadership of the teams in the elucidation of engineering problems; (ABET:d, g)		X	
5	Ability to define, formulate and solve engineering problems in the development, production, processing, protection and usage of engineering materials. (ABET:e)			X
6	An understanding of professional and ethical responsibilities(ABET:f)			
7	An understanding of current/contemporary issues and impact of engineering solutions in broad cultural, national and global levels;. (ABET:h, j)		X	
8	A comprehension of the nature of engineering progress closely linked with the development of new materials and production processes. An ability to engage in life-long learning and a recognition of its necessity (ABET:i)		X	
9	Ability to use essential tools and techniques of modern engineering in the development, production, processing, protecting and surface treatment of the existing and new engineering materials. (ABET:k)		X	

1: Little, 2. Partial, 3. Full
